Doc Status:	Final

PROGRAM SPECIFICATIONS

*Financial Assessment Subsystem – Public Housing
(FASS-PH)
Release 8.1.0.0*

U.S. Department of Housing and Urban Development

August 26, 2005

Revision Sheet

Revision No.	Date	Revision Description
Rev. 1.0	6/14/05	Initial version.
Rev. 1.1	6/21/05	Incorporated internal comments.
Rev. 1.2	6/22/05	Incorporated Peer Review comments.
Rev. 1.3	6/30/05	Incorporated IT Manager's Comments.

Program Specification Document

Program Specifications Authorization Memorandum

I have carefully assessed the Program Specifications for the Financial Assessment Subsystem-Public Housing (FASS PH) Release 8.1.0.0. This document has been completed in accordance with the requirements of the HUD System Development Methodology.

MANAGEMENT CERTIFICATION - Please check the appropriate statement.

_____ The document is accepted.

_____ The document is accepted pending the changes noted.

_____ The document is not accepted.

We fully accept the changes as needed improvements and authorize initiation of work to proceed. Based on our authority and judgment, the continued operation of this system is authorized.

Freddie Harrison
FASS-PH IT Manager

APPENDIX A:	BUSINESS RULES.....	13-180

1.0 GENERAL INFORMATION

1.0 GENERAL INFORMATION

1.1 Purpose

The Department of Housing and Urban Development (HUD) has established the HUD Annual Performance Plan (APP) to demonstrate how HUD is measuring progress toward achieving its critical mission: to promote adequate and affordable housing, economic opportunity, and a suitable living environment free from discrimination. Financial Assessment Subsystem – Public Housing (FASS-PH) aids HUD in meeting the following departmental goals and objectives: restoring the public trust, increasing affordable housing and reducing homelessness.

FASS-PH also aids HUD in addressing existing material weaknesses and business operating goals. Specifically, the FASS-PH functions address the following HUD material weaknesses identified by IG audit: Payment of Incorrect Subsidy Amount and HUD Resource Management. FASS-PH supports business operating plan goal 6.1.4 related to decreasing the share of public housing units managed by troubled housing authorities.

The FASS-PH Release 8.1.0.0 SDM Program Specifications Document is the second document in a series of two HUD System Development Methodology (SDM) Design Phase deliverable documents required from the FASS System Development Team. This series of SDM Design Phase deliverables includes the System/Subsystem Specifications and the Program Specifications. This document outlines the FASS-PH Release 8.1.0.0 Program Specifications.

1.2 Scope

FASS-PH Release 8.1.0.0 will expand FASS-PH capabilities as of Release 8.0.0.0 and is scheduled to be implemented on August 26, 2005. The following table describes the functionality to be implemented as part of FASS-PH Release 8.1.0.0.

Below is a list of the FASS-PH Release 8.1.0.0 requirements:

Requirement Table			
#	Req. #	Title	Description
1	2	Line Item G3000-010	First, the DCF/Financial Statement/G3000-010 Type of Audit Report/G3000-060 & G3000-070 will now reflect Fund Type and Opinion of the Fund rather than Program. Auditors should only be entering opinion for funds within the PHA.
2	3	View Prior Fiscal Year Submission Comments	Allow analysts to review prior years submission comments while still reviewing the current FYE submission. This will allow the analyst to review prior submission comments without navigating between multiple submissions.

Requirement Table			
#	Req. #	Title	Description
3	4	Line Item G4200-010 & G4200-050	Modify Line Item 4200-050 to default to “N/A”; if and only if Line Item 4200-010 is selected “No” for Non-Major Programs audited A133, there will be no penalty when this opinion is selected.
4	5	Line Item 1102	Modify line item 1102 so that the external user will not be able to enter data in the field. This new methodology should begin for all 9/30/2005 submissions.
5	6.2	FASS Analyst Column	Modify the FASS Analyst column for the external user inbox only to display the name of the Business Manager or Analyst.
6	6.7	FDS Report	Repair the FDS report page to print correctly from MS Internet Explorer.
7	7.1	Storing Assessment Attachments	Change the storage of permanent file attachments from being part of the UNIX /Windows file system to being stored as Binary Large Objects (BLOBs) in the database. All file attachments need to be stored and retrieved on the REACS database.
8	7.2	HTTPS on port 443 (default)	Remove any instances of http port in Cold Fusion templates and replace http port with the relative server.
9	7.7	WASS – Guest Checkbox	WASS will remove the guest checkbox on the Login interface. Have the system automatically recognized a guest user.
10	7.9	Remove Identity Type from the Participant Assessment Table.	Remove identity attribute from the column definition in the assessment table and replace the attribute with a stored procedure to find the sequential primary key value.
11	7.10	LOCCS/HUDCAPS Storing Data.	Remove storing Line of Credit Control System/ HUD Central Accounting Processing System (LOCCS/HUDCAPS) data in permanent tables and pipe the HOCCS/HUDCAPS data directly into the REAC database.
12	8	Modify the Review Submission Page description text.	On the Review Submission Page under the Financial Statement tab the instructions need to be modified. The first bullet of the instructions will be separated into two distinct bullets. The first bullet will read, “Government-Wide Financial Statements, If Applicable.” The second bullet will read, “Fund Financial Statements.”

1.3 System Overview

The FASS-PH is a subsystem of the Real Estate Assessment Center System (REACS). FASS-PH will help enable centralized financial analysis that can be used to identify where HUD should focus its limited resources to improve service delivery and manage its housing programs proactively. To achieve this goal, the following objectives have been identified:

- Gather standard financial data pertaining to each Public Housing Agency (PHA) and Section 8 Entity by combining standard fiscal audit information with reporting and compliance factors as defined by the Single Audit Act;
- Assess the financial condition of all PHAs and Section 8 Entities using a comprehensive protocol;
- Assess financial risk using standard financial data;
- Determine an objective, numerical score for each PHA and Section 8 Entity using standard protocols for financial performance review;
- Enable HUD staff to focus on the most troubled PHAs and Section 8 Entities based on the risk associated with the score;
- Eliminate or address existing material weaknesses identified through IG Audits. This includes mitigating potential risks;
- Support HUD's mission;
- Implement OMB Circular A-123 compliant policies and procedures;
- Support HUD's eGov Strategic Plan;
- Automate paper based forms to support the Government Paperwork Elimination Act (GPEA);
- Provide payback as early in the system lifecycle as possible;
- Provide significant benefits to HUD;
- All new functionality meets the Rehabilitation Act Section 508 requirements.

System Overview	
System and Subsystem Description	
System	Real Estate Assessment Center System (REACS)
Subsystem	Financial Assessment Subsystem - Public Housing (FASS-PH)
Responsible Party Description	
Sponsor	Public and Indian Housing – Real Estate Assessment Center (PIH-REAC)
Requirements	Avineon Inc.
Design	Avineon Inc.
Development	Avineon Inc.
System and Integration Testing	Avineon Inc., DCG
User Acceptance Testing	To be determined by PIH-REAC Management
Deployment	Avineon Inc., DCG
Maintenance	Avineon Inc., DCG
System Environment, Code, and Category: and Operational Status Description	
PCAS	307820
System Code	P093
System Category	Non-Major
Operational Status	Operational
System Environment	Web Based

The following table identifies and briefly describes the different users of FASS-PH.

User Environment	
Public Housing Agency (PHA)	PHAs and Section 8 Entities use FASS-PH to annually submit unaudited and audited financial data to the REAC for analysis. A PHA may also use the system to request submission extensions and to review the status of its financial submission(s).
Agents	A PHA may delegate the task of submitting financial information to its agent(s). Regardless of who submits its financial information, the PHA is ultimately responsible for the timeliness and accuracy of the submission.
Independent Public Accountant (IPA)	An IPA is responsible for reviewing and verifying audited submission data prior to a PHA's submission to the REAC. Again, the PHA is ultimately responsible for the timeliness and accuracy of the submission.
REAC PHA Financial Assessment Team	The REAC PHA Financial Assessment Team will use FASS-PH to perform its critical business processes, including the assessment of the financial condition of PHAs.

User Environment	
Other HUD Users	All other HUD users will have read-only access to FASS-PH in order to review PHA financial data. This includes field office and other HUD headquarters users.

1.4 Project References

The following documents provide a comprehensive understanding of the PHA financial assessment process. Most documents are available via the REAC Document Library. Additionally, several of the documents listed below are available through the PHA Financial Assessment Internet site at <http://www.hud.gov/offices/reac/products/prodpha.cfm>

1.5 Terms and Abbreviations

The following table defines terms and acronyms used throughout this document.

Term	Definition
ACWP	Actual Cost of Work Performed
APP	Annual Performance Plan
BCWP	Budgeted Cost of Work Performed
BCWS	Budgeted Cost of Work Scheduled
BLOBs	Binary Large Objects

Term	Definition
BRD	Business Requirements Document
CCB	Change Control Board
CCD	Change Control Board
CDR	Critical Design Review
CFDA	Catalog of Federal Domestic Assistance
CI	Configuration Item
CIO	Chief Information Officer
CLIN	Contract Line Item Number
CM	Configuration Management
CMM	Capability Maturity Model
CMMI	Capability Maturity Model Integrated
CMP	Configuration Management Plan
CO	Contracting Office
COR	Contracting Office Representative
COTS	Commercial Off The Shelf
CPI	Cost Performance Index
CR	Change Request
CSCI	Computer Software Configuration Item
CV	Cost Variance
DB	Database
DCF	Data Collection Form
DCG	Development Coordination Group
DMM	Deliverable Management Module
DOA	Date of Award
DR	Design Review
EAC	Estimate At Completion
EIN	Employer Identification Number
ETC	Estimate To Complete
EV	Earned Value
EVA	Earned Value Analysis
EVM	Earned Value Management
FASS	Financial Assessment Subsystem
FASS-PH	Financial Assessment Subsystem – Public Housing
FCA	Functional Configuration Audit
FDS	Financial Data Schedule
FEDSIM	Federal Systems Integration and Management Center
FOIA	Freedom Of Information Act
FQR	Formal Qualification Review
FRD	Functional Requirements Document
FY	Fiscal Year
FYE	Fiscal Year End
GAAP	Generally Accepted Accounting Principles

Term	Definition
GAGAS	Generally Accepted Government Auditing Standards
GAO	Government Accounting Office
GASB	Governmental Accounting Standards Board
GPEA	Government Paperwork Elimination Act
GSA	General Services Administration
GTM	Government Technical Monitor
HA(s)	Housing Authority
HTML	Hypertext Markup Language
HUD	Department of Housing and Urban Development
HUD OIG	HUD Office of Inspector General
HUDCAPS	HUD Central Accounting Processing System
HUDWeb	HUD's Intranet Web Site
ICD	Interface Control Deliverable
IG	Inspector General
IG	Inspector General
IPA	Independent Public Accountant
IPR	In Progress Reviews
ISG	Internet Services Group
IT	Information Technology
IV&V	Independent Verification & Validation
JAD	Joint Application Development
LOCCS	Line of Credit Control System
LPF	Late Presumptive Failure
MF	Multi-Family
NASS	Integrated Assessment Subsystem
NDS	Non-Developmental Software
ODC	Other Direct Costs
OMB	Office of Management and Budget
PASS	Physical Assessment Subsystem
PCA	Physical Configuration Audit
PD&R	Policy Development and Research
PDR	Preliminary Design Review
PH	Public Housing
PHA	Public Housing Agency/Public Housing Authority
PHAS	Public Housing Assessment System
PIH	Public and Indian Housing
PIH-REAC	Public Indian Housing - Real Estate Assessment Center
PM	Project Manager
PMC	Project Monitoring and Control
PMP	Project Management Plan
PNR	Problem Notification Report
POC	Points of Contact

Term	Definition
PP	Project Plan
PP&O	Project Planning & Oversight
PPQA	Product & Process Quality Assurance
PR	Problem Reports
PRR	Product Readiness Review
QA	Quality Assurance
QAG	Quality Assurance Guidelines
QAP	Quality Assurance Plan
QASS	Quality Assessment Subsystem
RAF	Risk Analysis Form
RASS	Residential Assessment Subsystem
REAC	Real Estate Assessment Center
REACS	Real Estate Assessment Center System
RM	Risk Management
RR	Requirements Review
SAC	PHAS invalidation action code
SCI	Software Configuration Item
SCR	Software Change Request
SDD	Software Design Description
SDF	Software Development File
SDL	Software Development Library
SDM	Software Development Methodology
SDP	System Decision Paper
SDR	Software Design Review
SMP	Software Measurement Plan
SOW	Statement Of Work
SPI	Schedule Performance Index
SQA	Software Quality Assurance
SQL	Standard Query Language
SR	Specification Review
SRS	Software Requirements Specification
SSDD	System/Subsystem Specification
SSR	Software Specification Review
SSS	System/Subsystem Specification
SV	Schedule Variance
SW	Software
TAC	Technical Assistance Center (formerly the Customer Service Center)
TBD	To Be Defined
TOR	Task Order Request
TOS	Tracking & Ordering System
TRB	Technical Review Board

Term	Definition
TRR	Test Readiness Review
UAT	User Acceptance Testing
UDF	Unit Development Folder
UFI	Unique Fee Accountant Identifier
UFRS	Unified Financial Recording Standards
UII	Unique IPA Identifier
WASS	Web Access Security System
WBS	Work Breakdown Structure
WDDX	Web Dynamic Exchange
XML	eXtensible Mark-up Language

1.6 Points of Contact

1.6.1 Information

Points of Organizational Contacts Table				
Contact Name	Organization	Position	Telephone Number	Email
Nick Miele	PIH-REAC	FASS PH Business Program Manager	202-475-8788	Nicholas_X._Miele@hud.gov
Steve Bolden	PIH-REAC	FASS PH Assessment Manager for Systems Operations	202-475-8706	Steve_A._Bolden@hud.gov
Freddie Harrison	PIH-REAC	FASS PH IT Manager	202-475-8639	Frieddie_Harrison@hud.gov
Keith Bennett	Avineon Inc.	Project Manager	202-475-8903	Keith_Bennett@HUD.gov
Joneff Chung	Avineon Inc.	FASS-PH Requirements Lead	202-475-8889	Joneff_Chung@HUD.gov
Surafiel Berek	Avineon Inc.	FASS-PH Development Lead	202-475-8828	Surafiel_Berek@HUD.gov
Mohammed Hasan (Ashraf)	Avineon Inc.	FASS-PH Maintenance Lead	202-475-8898	Mohammed_A._Hasan@HUD.gov

1.6.2 Coordination

FASS-PH will coordinate with the following organizations to successfully implement the FASS-PH Release 8.1.0.0:

Organization	Support Function
--------------	------------------

Organization	Support Function
PIH-REAC	Business Requirements Support, Project Management
Avineon/FTI/Mil	Requirements, Design, Development, Testing, Installation, Deployment, Maintenance, Technical Support /Operations, Project Management
DCG	Customer Support/Operations, Development Coordination, Integration Test Coordination, Deployment, and Maintenance
HUD IT	Implementation Coordination
FASS-PH Lab	Business Requirements Support, Version 4 Scoring Thresholds
WASS	Security
NASS	Integration
QASS	Integration

Listed below are the coordination dates that each Real Estate Assessment Center System (REACS) must achieve in order to adhere to the August 26, 2005 release date.

Integration Test Start Date	Code Locked Date	Integration Test End Date	Final HARTS Request Submission Date	Release Date
07/13/2005	08/01/2005	08/08/2005	08/01/2005	08/26/2005

1.7 Master List of Programs

The following is a list of programs that will be implemented in FASS PH Release 8.1.0.0. These programs will either be new for the system or modifications of existing functionality. This information will be clearly stated within the content of the program descriptions.

1.7.1 DCF Financial Statement Line Item G3000-010

The DCF/Financial Statement/G3000-010 Type of Audit Report/G3000-060 & G3000-070 text will be modified to reflect opinion of Fund (rather than Program). Auditors should only be entering an opinion for funds with in the PHA.

1.7.2 View of Prior Years Submission Comments

The Review Submission “View Prior Fiscal Years Comments Page” provides FASS-PH internal users the ability to review prior years reviewers comments while still reviewing the current year’s submissions.

This will allow the reviewers to review prior submission comments without navigating between multiple submissions.

1.7.3 Additional Valid Value for DCF Line Item 4200-050

A new logic will be introduced to Line Items: G4200-050 and G4200-010. If the external user selects a “No” value for Line Item G4200-010, Line Item G4200-050 will default to “Not Applicable” value and a pop-up window will inform the user of the logic between these two Line Items.

1.7.4 Line Item 1102

New logic will be in place, so that the external user will not be able to enter any amount on Line Item 1102. This new methodology should begin for all 9/30/2005 submissions.

1.7.5 Analyst Column Display of Analyst and Manager’s Names

External Inbox of the FASS-PH analyst column modification is a maintenance requirement and will introduce a new logic regarding how to display the FASS-PH employee in the FASS-PH Analyst column. Only the financial analyst or manager that last view the submission will be display in this column. The director’s name must not appear in this column.

1.7.6 FDS Report Page Print Functionality

This requirement will place page breaks on the Financial Data Schedule (FDS) report, so that it prints properly.

1.7.7 Review Submission Page Text Change

The descriptive text on the Review Submission Page under the Financial Statement tab will be modified to read “Government-Wide and or Fund Financial Statement.”

1.8 Infrastructure Changes

The following infrastructure enhancements will be implemented along with Release 8.1.0.0 as mandated by the Development Coordination Group (DCG).

1.8.1 File Attachments Storage

This is a modification to how file attachments are stored in FASS-PH. All file attachments in FASS-PH assessments must now be stored as Binary Large Objects (BLOBs) in the database.

This functionality will replace the current method of storing files in directories within the FASS-PH. Prior to release 8.1.0.0 DCG will move all attachments to the REAC database.

1.8.2 Application Use of Port 443

All hard coded port number from all Cold Fusion templates and replace the port number with the relative server name.

1.8.3 Removal of Check Box for Guest Users

The Removal of Check Box requirement calls for modification to how a guest user logs into FASS-PH. Currently a guest user manually checks the Guest User checkbox on the login interface. Web Access Subsystem (WASS) will remove the Guest user checkbox beginning with Release 8.1.0.0. The FASS-PH system will implement a new functionality on how a guest user is identified. The system will search to find if any Role ID's is associated with the User ID. If a Role ID's is associated with the User ID, the user will be redirected to the Main Internal page. If no Role ID is associated with the User ID, the user will be redirected to the Main Guest Page.

1.8.4 Identity Type

The Identity Type requirement calls for modification to the participant assessment table in the REAC database. The identity attribute of the column definition in a database is used by the database application to find the next sequential primary key. The identity attribute of the column definition will be disabled for the assessment_id field in the participate_assessment table. To compensate for the lack of the identity functionality, the maximum assessment_id is identified and will be incremented by one.

1.8.5 LOCCS/HUDCAPS Interface Change

A new procedure will be implemented on how data is inserted into the LOCCS/HUDCAPS modification to the LOCCS/HUDCAPS interface. According to DCG requirements, applications must not create permanent tables within HUD related databases. A new procedure will be created to insert LOCCS/HUDCAPS data into the REAC database.

2.0 DCF Financial Statement Line Item G3000-010

2.0 DCF FINANCIAL STATEMENT LINE ITEM G3000-010

2.1 Program Description

The DCF/Financial Statement/G3000-010 Type of Audit Report/G3000-060 and G3000-070 text will be modified to reflect opinion of Fund (rather than Program). Auditors should only be entering an opinion for funds with in the PHA.

New or Modification: Modified

Screen Traceability: The following table traces the screen design to one or more business rules, process numbers, functional requirements, and issue tracking references (if applicable).

Business Rule #	Process #	Functional Requirement #	Source
1.1	1.4.1	494	RTM

2.1.1 Software Unit Description

Text changes are needed to adhere to accounting principles. Accountants should only be entering opinion of funds within the PHA and not entering opinion of a program. The text changes will occur in the external and internal DCF Federal Program interface and in the Line Item G3000-010 Detail interface.

The text will change in only one place on the external and internal DCF Federal Program interface. In the description column on the Line Item G3000-010 row, the text will change from “Type of Audit Report” to “Fund Opinion(s)”.

For Line Item G3000-060 and Line Item G3000-070 Detail interface, the text will change for every Federal Program name. For each Federal Program name that occurs on this interface, the wording “Fund Type and Opinion of the Fund containing” will be placed in front of the Federal Program name.

2.1.2 Software Unit

The page is accessible by selecting the Financial Statement tab on the FASS-PH system. Users access the DCF Federal Program interface and the Line Item G3000-010 and click on the “details” interface link to view Line Items G3000-060 and G3000-070. The text change will be visible for each Federal Program name that occurs on the interface.

2.1.3 Accuracy and Validity

DCF/Financial Statement line item G3000-010 Type of Audit Report/G3000-060 and G3000-070 “Opinion of the Fund” will be reflected rather the Program.

2.1.4 Timing

FASS-PH must conform to the REAC standards of timing and timely operation. The following is a more detailed table of the timing information expected by the program within FASS-PH:

PERFORMANCE MEASURE	TESTING PROCEDURE
Timing	
FASS-PH will score submitted PHA submissions every evening.	After the programs have run in the REAC Nightly Batch in test environments, the database will be queried to confirm that the scoring procedures have executed properly throughout the testing phase.
FASS-PH will be available for PHA submission entry 24 hours per day, except for downtime during scheduled system maintenance and upgrades.	Multiple submissions will be made throughout the duration of the testing phase.
FASS-PH will provide capability to generate multiple reports 24 hours per day except for downtime during scheduled system maintenance and upgrades.	Multiple reports will be generated throughout the duration of the testing phase.
FASS-PH will provide capability to load every page in 8 seconds or less (except for waived pages).	Timing requirements cannot be fully tested. REAC does not have an automated testing tool capable of testing these requirements. However, the testing team will execute tests scripts with the debug application turned on in order to monitor load time in system test.
FASS-PH will provide capability to execute every stored procedure in 3 seconds or less (except for stored procedures on waived pages).	Timing requirements cannot be fully tested. REAC does not have an automated testing tool capable of testing these requirements. However, the testing team will execute tests scripts with the debug application turned on in order to monitor load time in system test.

2.1.5 Adaptability

Flexibility of FASS-PH will be enhanced by this requirement and text changes are needed to adhere to accounting principles.

2.2 Environment

2.2.1 Support Software Environment

The support software environment is comprised of the following software packages:

Software	Description
Sybase	A widely used database management tool.
HTML	A widely used and accepted scripting language.
JavaScript	A widely used and accepted scripting language.
Cold Fusion Studio 5.0	A widely used application development tool.
ErWin	This tool allows the development team to develop the logical and physical models for the project.
PVCS Version Manager	This tool is used for configuration management.
PVCS Tracker	This tool is used for reporting and tracking system change requests.
SQL Advantage	This tool serves as an interface to the Sybase database.
SQL Programmer	This tool serves as an interface to the Sybase database.
Netscape 4.79, Internet Explorer 6.0 SP2	Browsers that serve as the default web browsers for the FASS-PH application.
Adobe Acrobat Reader Version 5.0 or higher	This tool is used to create the Data Collection Form Report.
XML Tools	These tools are used for developing and managing XML assets.
Dream Weaver	This tool is used for developing and managing web sites.

2.2.2 Interfaces

The DCF Financial Statement Line Item G3000-010 does not interface with other systems.

2.2.3 Storage

This capability does not require significant additional space. DCG will determine if additional space is necessary. For more information, please refer to Section 3.1.2 (Storage Medium) in the System/Subsystem Specifications document. Refer to HUD Handbook 2229.1 Records Disposition Scheduling for Automated System for further information on data storage.

2.2.3.1 *Internal Storage*

There are no new internal storage requirements to support this capability.

2.2.3.2 *Device Storage*

There are no new device storage requirements to support this capability.

2.2.3.3 *Offline Storage*

There are no new offline storage requirements to support this capability.

2.2.3.4 *Temporary and Permanent Storage*

There are no new temporary and permanent storage requirements to support this capability.

2.2.4 Security

The following table shows user access rights for the DCF/Financial Statement reports.

Role	Create	Read	Update	Delete	Detailed Description
PID		<input checked="" type="checkbox"/>			Users can only view the information.
FIA		<input checked="" type="checkbox"/>			Users can only view the information.
SMT		<input checked="" type="checkbox"/>			Users can only view the information.
CPV		<input checked="" type="checkbox"/>			Users can only view the information.
FID		<input checked="" type="checkbox"/>			Users can only view the information.
AM		<input checked="" type="checkbox"/>			Users can only view the information.
RFA		<input checked="" type="checkbox"/>			Users can only view the information.
GUS		<input checked="" type="checkbox"/>			Users can only view the information.
MRA		<input checked="" type="checkbox"/>			Users can only view the information.

2.2.5 Communications Environment

FASS-PH only requires that users access the system via the Internet or Intranet. All communications are done over this medium.

2.3 Design Details

3.0 PRIOR YEARS SUBMISSION COMMENTS REVIEW

3.0 PRIOR YEARS SUBMISSION COMMENTS REVIEW

3.1 Program Description

The prior years submission comments review capability will allow users to view prior PHA's Fiscal Year Submission Comments. A hyperlink will be incorporated to the “Reviewer Comments” interface to direct users to the “View Prior Years Comment” interface. This new interface will be divided into two sections. The first top section will be the interactive part of the interface. Users will have the ability to view prior years comments by selecting from two criteria, Fiscal Year and Submission type. Also, a “Review Comments” link will be part of this section to redirect users back to the “Reviewer Comments” interface. The second bottom section of the interface will display the output. The output will display a listing of all comments, their entry date, and their recommendation. By default, the interface will display all comments and their attributes for the selected fiscal year. If a PHA does not have comments from the previous FY year, the interface will indicate that fact.

New or Modification: New

Screen Traceability: The following table traces the screen design to one or more business rules, process numbers, functional requirements, and issue tracking references (if applicable).

Business Rule #	Process #	Functional Requirement #	Source
6.1	1.4.2	504	RTM

3.1.1 Software Unit Description

The “View Prior Fiscal Years Comment” interface is a new functionality to the FASS-PH system. This interface will allow only the internal user, which consists of the Financial Analyst, Assessment Manager, and the Director to view prior fiscal years’ comments.

This interface will be linked from the “Reviewer Comments” interface. Once the internal user selects the link, the browsers will redirect the internal user to the “View Prior Fiscal Years Comment” interface. This interface will be divided into two sections: an interactive section and an output section

The interactive section of this interface will provide the user with the ability to view different outputs by changing the search criteria. The search criteria are Fiscal Year and Submission Type. The Fiscal Years search criterion will have the date range of all submissions’ fiscal years currently in the FASS-PH. The Submission Type search criterion consists of only two options of Audited and Unaudited submissions. By default, the search criteria values are the current fiscal year of the selected submission and both Audited and Unaudited submissions. In addition, the

user will have the ability to redirect the browser to the original ‘Reviewer comment’ interface by selecting the ‘Back to Reviewer comment page link.

The output section of this interface will allow the user to view all of the comments and their attributes for the initial search criteria default values or the user’s selection of the search criteria. The output will consists of the reviewer’s name, comment(s), the comment’s entry date(s), and the recommendation(s).

3.1.2 Software Unit

The page can be accessed from the “Reviewer Comments” page by clicking the “View Prior Fiscal Years Comment” link. The “Go Button” will allow a user to submit a fiscal year and submission type search criteria. This button will be displayed at all times on the ‘View Prior Fiscal Years Comments’ page.

3.1.3 Accuracy and Validity

By default, the interface displays all comments and their attributes from the selected year. If PHA does not have any comments from the previous year, the interface will indicate that fact.

3.1.4 Timing

FASS-PH must conform to the REAC standards of timing and timely operation. The following is a more detailed table of the timing information expected by the program within FASS-PH:

PERFORMANCE MEASURE	TESTING PROCEDURE
Timing	
FASS-PH will score submitted PHA submissions every evening.	After the programs have run in the REAC Nightly Batch in test environments, the database will be queried to confirm that the scoring procedures have executed properly throughout the testing phase.
FASS-PH will be available for PHA submission entry 24 hours per day, except for downtime during scheduled system maintenance and upgrades.	Multiple submissions will be made throughout the duration of the testing phase.
FASS-PH will provide capability to generate multiple reports 24 hours per day except for downtime during scheduled system maintenance and upgrades.	Multiple reports will be generated throughout the duration of the testing phase.

PERFORMANCE MEASURE	TESTING PROCEDURE
Timing	
FASS-PH will provide capability to load every page in 8 seconds or less (except for waived pages).	Timing requirements cannot be fully tested. REAC does not have an automated testing tool capable of testing these requirements. However, the testing team will execute tests scripts with the debug application turned on in order to monitor load time in system test.
FASS-PH will provide capability to execute every stored procedure in 3 seconds or less (except for stored procedures on waived pages).	Timing requirements cannot be fully tested. REAC does not have an automated testing tool capable of testing these requirements. However, the testing team will execute tests scripts with the debug application turned on in order to monitor load time in system test.

3.1.5 Adaptability

FASS-PH will display a report of any edit flags generated by the submission to both external and internal users. This report will allow PHAs to modify their submissions in response to possible flags that would have been identified during the internal review process. In turn, this report will reduce the manual review processes for internal users. “Back to Reviewer Comment” page hyperlink allows the user to navigate to ‘Reviewer Comments’ page.

3.2 Environment

3.2.1 Support Software Environment

The support software environment is comprised of the following software packages:

Software	Description
Sybase	A widely used database management tool.
HTML	A widely used and accepted scripting language.
JavaScript	A widely used and accepted scripting language.
Cold Fusion Studio 5.0	A widely used application development tool.
ErWin	This tool allows the development team to develop the logical and physical models for the project.
PVCS Version Manager	This tool is used for configuration management.
PVCS Tracker	This tool is used for reporting and tracking system change requests.
SQL Advantage	This tool serves as an interface to the Sybase database.
SQL Programmer	This tool serves as an interface to the Sybase database.
Netscape 4.79, Internet Explorer 6.0 SP2	Browsers that serve as the default web browsers for the FASS-PH application.
Adobe Acrobat Reader Version 5.0 or higher	This tool is used to create the Data Collection Form Report.

Software	Description
XML Tools	These tools are used for developing and managing XML assets.
Dream Weaver	This tool is used for developing and managing web sites.

3.2.2 Interfaces

Reviewing of prior years submission comments does not interface with other systems.

3.2.3 Storage

This capability does not require significant additional space. DCG will determine if additional space is necessary. For more information, please refer to Section 3.1.2 (Storage Medium) in the System/Subsystem Specifications document. Refer to HUD Handbook 2229.1 Records Disposition Scheduling for Automated System for further information on data storage.

3.2.3.1 *Internal Storage*

There are no new internal storage requirements to support this capability.

3.2.3.2 *Device Storage*

There are no new device storage requirements to support this capability.

3.2.3.3 *Offline Storage*

There are no new offline storage requirements to support this capability.

3.2.3.4 *Temporary and Permanent Storage*

There are no new temporary and permanent storage requirements to support this capability.

3.2.4 Security

The following table shows user access rights for reviewing prior years submission comments.

Role	Create	Read	Update	Delete	Detailed Description
PID		<input checked="" type="checkbox"/>			Users can only view the information.

Role	Create	Read	Update	Delete	Detailed Description
FIA		<input checked="" type="checkbox"/>			Users can only view the information.
SMT		<input checked="" type="checkbox"/>			Users can only view the information.
CPV		<input checked="" type="checkbox"/>			Users can only view the information.
FID		<input checked="" type="checkbox"/>			Users can only view the information.
AM		<input checked="" type="checkbox"/>			Users can only view the information.
RFA		<input checked="" type="checkbox"/>			Users can only view the information.
GUS		<input checked="" type="checkbox"/>			Users can only view the information.
MRA		<input checked="" type="checkbox"/>			Users can only view the information.

3.2.5 Communications Environment

FASS-PH only requires that users access the system via the Internet or Intranet. All communications are done over this medium.

3.3.2 Output

The output section of this interface will allow the user to view all of the comments and their attributes for the initial search criteria default values or the user's selection of the search criteria. The output will consist of the reviewer's name, comment(s), the comment's entry date(s), and the recommendation(s).

3.3.2.1 *Output Reports*

Current year and prior years review comments, reviewer's name, and review date.

3.3.2.2 *Output Data Elements*

fiscal_year user_id
action_date
action-code
action_comment,

3.3.3 Software Relationships

The "View Prior Fiscal Years Comment" interface is a new functionality to the FASS-PH system. This interface will allow only the internal user, which consists of the Financial Analyst, Assessment Manager, and the Director to view prior fiscal years' comments.

This interface will be linked from the Reviewer Comments interface. Once the internal user clicks the link, the browsers will redirect the internal user to the "View Prior Fiscal Years Comment" interface. This interface will be divided into two sections: an interactive section and an output section

The interactive section of this interface will provide the user with the ability to view different outputs by changing the search criteria. The search criteria are “Fiscal Year” and “Submission Type”.

The “Fiscal Years” search criterion will have the date range of all submissions’ fiscal years currently in the FASS-PH.

The “Submission Type” search criterion will consists of only two options of Audited and Unaudited submissions. By default, the search criteria values will be the current fiscal year of the selected submission and both Audited and Unaudited submissions. Also the user will have the ability to redirect the browser to the original ‘Reviewer comment’ interface by clicking the ‘Back to Reviewer’ comment page link.

The output section of this interface will allow the user to view all of the comments and their attributes for the initial search criteria default values or the user’s selection of the search criteria. The output will consists of the reviewer name, comment(s), the comment’s entry date(s), and the recommendation(s).

3.3.4 Software Unit Logic

The following sections contain the detailed software unit logic.

Object Action Table

Field Name	Editable by REAC (Source System)	Datastore / Reference Table	Data Element	Data Element Type/ Length	Values	Description/ Comments
Reviewer	No (REAC) (HERMS)	participant_assess_action/Msf_user	User_id/ user_first_name/user_last_name	Char(6)	user_first_name/ user_last_name	It will display the first name and last name of the person who submitted the comment
Recommendation Type	No (REAC)	participant_assess_action	action_code	Char(3)	AP1, AP2, APS, RJ1, RJ2, RJS, AC1, AC2 and ACV	It displays the recommendation type. It will display 'Accept Submission' if the action code is 'AP1', 'AP2', and 'APS'. It will display 'Rejected Submission' if the 'RJ1', 'RJ2', and 'RJS'. It will display 'Conditionally Accept Submission' if the action code is AC1, AC2 and ACV
Comment	No REAC	participant_assess_action	action_comment	text	Action_comment value from participant_assess_action	It displays the internal comment for Conditional Acceptance, Accept Submission and Rejection comment.

Field Name	Editable by REAC (Source System)	Datastore / Reference Table	Data Element	Data Element Type/ Length	Values	Description/ Comments
Comment Date	(No) REAC	participa nt_assess _action	action_date	Datetime	action_date value fromparticipa nt_assess_act ion table	This is the date where the comment is inserted or updated into the database.

Software Unit Logic

View Prior Years Submission Comments Stored Procedures

To populate comments for the current fiscal year.

To identify the fiscal years:

```
SELECT distinct datename(yy,year_end_dt) as fiscal_year
FROM year_end_ref noholdlock
Where datename(yy,year_end_dt) > '1998'
ORDER BY fiscal_year desc
```

To identify the assessments for the selected fiscal year:

```
SELECT participant_id, assessment_id, group_id,
version_id, fiscal_year
FROM participant_assessment noholdlock
WHERE participant_id = @participant_id
AND group_id IN (56, 57)
AND fiscal_year = @fiscal_year
```

Once the assessment_id(s) are identified, identify the internal comments.

```
SELECT action_code, action_comment,
convert(varchar,action_date,101) as action_date
FROM participant_assess_action noholdlock
WHERE object_id = 1 and
group_id = #group_id# and
assessment_id = # assessment_id#
and participant_id = # participant_id#
and system_id = 'FASPHA'
and action_code in ('AC1','AC2','ACV', 'AP1', 'AP2', 'APS', 'RJ1', 'RJ2', 'RJS')
```

4.0 ADDITIONAL VALID VALUE FOR DCF LINE ITEM 4200-050

4.0 ADDITIONAL VALID VALUE FOR DCF LINE ITEM 4200-050

4.1 Program Description

DCF Line Item 4200-050 will be defaulted to “N/A” for Non-Major Programs audited A133, there will be no penalty when this opinion is selected. If a user selects ‘No’ for line item 4200-010, the user will be alerted and line item 4200-050 will be defaulted to ‘N/A’

New or Modification: Modification

Screen Traceability: The following table traces the screen design to one or more business rules, process numbers, functional requirements, and issue tracking references (if applicable).

Business Rule #	Process #	Functional Requirement #	Source
1.1	1.4.1	495	RTM

4.1.1 Software Unit Description

Additional valid value for DCF line item 4200-050 will be introduced. Value of “N/A” is acceptable for Non-Major Programs; there will be no penalty when this opinion is selected.

4.1.2 Software Unit

Both the internal and external users can access the page by clicking on the Data Collection Form (DCF) link, then selecting “Federal Programs” and then selecting “details”.

4.1.3 Accuracy and Validity

If a user selects “No” to DCF line Item “G4200-010”, and not selected N/A to DCF line Item “G4200-050, a pop-up warning will alert the user that “G4200-050” must be “N/A” in order to proceed with the DCF. DCF line item “G4200-050” will be set to “N/A” and form field will be disabled (grayed).

Once a user selects other values other than N/A for item line “G4200-010”, item line “G4200-050” is set back to editable field.

This function applies to Submission Type “Audited/A-133” only

4.1.4 Timing

FASS-PH must conform to the REAC standards of timing and timely operation. The following is a more detailed table of the timing information expected by the program within FASS-PH:

PERFORMANCE MEASURE	TESTING PROCEDURE
Timing	
FASS-PH will score submitted PHA submissions every evening.	After the programs have run in the REAC Nightly Batch in test environments, the database will be queried to confirm that the scoring procedures have executed properly throughout the testing phase.
FASS-PH will be available for PHA submission entry 24 hours per day, except for downtime during scheduled system maintenance and upgrades.	Multiple submissions will be made throughout the duration of the testing phase.
FASS-PH will provide capability to generate multiple reports 24 hours per day except for downtime during scheduled system maintenance and upgrades.	Multiple reports will be generated throughout the duration of the testing phase.
FASS-PH will provide capability to load every page in 8 seconds or less (except for waived pages).	Timing requirements cannot be fully tested. REAC does not have an automated testing tool capable of testing these requirements. However, the testing team will execute tests scripts with the debug application turned on in order to monitor load time in system test.
FASS-PH will provide capability to execute every stored procedure in 3 seconds or less (except for stored procedures on waived pages).	Timing requirements cannot be fully tested. REAC does not have an automated testing tool capable of testing these requirements. However, the testing team will execute tests scripts with the debug application turned on in order to monitor load time in system test.

4.1.5 Adaptability

This functionality will prevent the user from entering incorrect information for line item G4200-050.

4.2 Environment

4.2.1 Support Software Environment

The support software environment is comprised of the following software packages:

Software	Description
Sybase	A widely used database management tool.
HTML	A widely used and accepted scripting language.
JavaScript	A widely used and accepted scripting language.
Cold Fusion Studio 5.0	A widely used application development tool.
ErWin	This tool allows the development team to develop the logical and physical models for the project.
PVCS Version Manager	This tool is used for configuration management.
PVCS Tracker	This tool is used for reporting and tracking system change requests.
SQL Advantage	This tool serves as an interface to the Sybase database.
SQL Programmer	This tool serves as an interface to the Sybase database.
Netscape 4.79, Internet Explorer 6.0 SP2	Browsers that serve as the default web browsers for the FASS-PH application.
Adobe Acrobat Reader Version 5.0 or higher	This tool is used to create the Data Collection Form Report.
XML Tools	These tools are used for developing and managing XML assets.
Dream Weaver	This tool is used for developing and managing web sites.

4.2.2 Interfaces

Modification to FASS-PH line item G4200-050 does not interface with other systems.

4.2.3 Storage

This capability does not require significant additional space. DCG will determine if additional space is necessary. For more information, please refer to Section 3.1.2 (Storage Medium) in the System/Subsystem Specifications document. Refer to HUD Handbook 2229.1 Records Disposition Scheduling for Automated System for further information on data storage.

4.2.3.1 *Internal Storage*

There are no new internal storage requirements to support this capability.

4.2.3.2 *Device Storage*

There are no new device storage requirements to support this capability.

4.2.3.3 *Offline Storage*

There are no new offline storage requirements to support this capability.

4.2.3.4 *Temporary and Permanent Storage*

There are no new temporary and permanent storage requirements to support this capability.

4.2.4 Security

The following table shows user access rights for reviewing prior years submission comments.

Role	Create	Read	Update	Delete	Detailed Description
PID		<input checked="" type="checkbox"/>			Users can only view the information.
FIA		<input checked="" type="checkbox"/>			Users can only view the information.
SMT		<input checked="" type="checkbox"/>			Users can only view the information.
CPV		<input checked="" type="checkbox"/>			Users can only view the information.
FID		<input checked="" type="checkbox"/>			Users can only view the information.
AM		<input checked="" type="checkbox"/>			Users can only view the information.
RFA		<input checked="" type="checkbox"/>			Users can only view the information.
GUS		<input checked="" type="checkbox"/>			Users can only view the information.
MRA		<input checked="" type="checkbox"/>			Users can only view the information.

4.2.5 Communications Environment

FASS-PH only requires that users access the system via the Internet or Intranet. All communications are done over this medium.

5.0 LINE ITEM 1102

5.0 LINE ITEM 1102

5.1 Program Description

New logic will be in place, so that the external user will not be able to enter any amount on Line Item G1102. This new methodology should begin for all 9/30/2005 submissions.

New or Modification: Modification

Screen Traceability: The following table traces the screen design to one or more business rules, process numbers, functional requirements, and issue tracking references (if applicable).

Business Rule #	Process #	Functional Requirement #	Source
1.1,4.1	1.4.1	496	RTM

5.1.1 Software Unit Description

For Fiscal Year 09/30/2005 and beyond allow no entries for Line Item 1102. Whenever the user enters value for this line item, a pop-up message will appear.

5.1.2 Software Unit

Both the internal and external users can access the page by clicking on the Financial Data Schedule (FDS) link, then clicking on the “Revenue & Expense” tab.

5.1.3 Accuracy and Validity

When a user enters a value in line item 1102 starting with Fiscal Year 09/30/2005, a pop-up alert message will appear to alert the user that entering data for the line item is invalid.

5.1.4 Timing

FASS-PH must conform to the REAC standards of timing and timely operation. The following is a more detailed table of the timing information expected by the program within FASS-PH:

PERFORMANCE MEASURE	TESTING PROCEDURE
Timing	
FASS-PH will score submitted PHA submissions every evening.	After the programs have run in the REAC Nightly Batch in test environments, the database will be queried to confirm that the scoring procedures have executed properly throughout the testing phase.
FASS-PH will be available for PHA submission entry 24 hours per day, except for downtime during scheduled system maintenance and upgrades.	Multiple submissions will be made throughout the duration of the testing phase.
FASS-PH will provide capability to generate multiple reports 24 hours per day except for downtime during scheduled system maintenance and upgrades.	Multiple reports will be generated throughout the duration of the testing phase.
FASS-PH will provide capability to load every page in 8 seconds or less (except for waived pages).	Timing requirements cannot be fully tested. REAC does not have an automated testing tool capable of testing these requirements. However, the testing team will execute tests scripts with the debug application turned on in order to monitor load time in system test.
FASS-PH will provide capability to execute every stored procedure in 3 seconds or less (except for stored procedures on waived pages).	Timing requirements cannot be fully tested. REAC does not have an automated testing tool capable of testing these requirements. However, the testing team will execute tests scripts with the debug application turned on in order to monitor load time in system test.

5.1.5 Adaptability

This functionality will prevent users from entering value in line item 1102 starting with Fiscal Year 09/30/2005.

5.2 Environment

5.2.1 Support Software Environment

The support software environment is comprised of the following software packages:

Software	Description
Sybase	A widely used database management tool.

Software	Description
HTML	A widely used and accepted scripting language.
JavaScript	A widely used and accepted scripting language.
Cold Fusion Studio 5.0	A widely used application development tool.
ErWin	This tool allows the development team to develop the logical and physical models for the project.
PVCS Version Manager	This tool is used for configuration management.
PVCS Tracker	This tool is used for reporting and tracking system change requests.
SQL Advantage	This tool serves as an interface to the Sybase database.
SQL Programmer	This tool serves as an interface to the Sybase database.
Netscape 4.79, Internet Explorer 6.0 SP2	Browsers that serve as the default web browsers for the FASS-PH application.
Adobe Acrobat Reader Version 5.0 or higher	This tool is used to create the Data Collection Form Report.
XML Tools	These tools are used for developing and managing XML assets.
Dream Weaver	This tool is used for developing and managing web sites.

5.2.2 Interfaces

Debt Principal Payments – Line Item 1102 does not interface with other systems.

5.2.3 Storage

This capability does not require significant additional space. DCG will determine if additional space is necessary. For more information, please refer to Section 3.1.2 (Storage Medium) in the System/Subsystem Specifications document. Refer to HUD Handbook 2229.1 Records Disposition Scheduling for Automated System for further information on data storage.

5.2.3.1 *Internal Storage*

There are no new internal storage requirements to support this capability.

5.2.3.2 *Device Storage*

There are no new device storage requirements to support this capability.

5.2.3.3 *Offline Storage*

There are no new offline storage requirements to support this capability.

5.2.3.4 *Temporary and Permanent Storage*

There are no new temporary and permanent storage requirements to support this capability.

5.2.4 Security

The following table shows user access rights for reviewing prior years submission comments.

6.0 FASS-PH ANALYST INBOX

6.0 FASS ANALYST INBOX

6.1 Program Description

FASS Analyst column of the External Inbox will be modified to display names of the Analyst or Business Manager.

This maintenance requirement will provide the functionality to display only a manager's or financial analyst's name in the FASS Analyst column that last viewed the submission. Following this logic, the director's name should never be display in this column.

New or Modification: Modification

Screen Traceability: The following table traces the screen design to one or more business rules, process numbers, functional requirements, and issue tracking references (if applicable).

Business Rule #	Process #	Functional Requirement #	Source
5	2.3	498	RTM

6.1.1 Software Unit Description

This maintenance requirement will provide the functionality to display only the manager or financial analyst names in the FASS-PH Analyst column of the External Inbox that last viewed the submission. Following this logic, a director's name is never displayed in the FASS-PH Analyst column.

6.1.2 Software Unit

This modification applies to the external users inbox only. The inbox is accessible once a use logs into the system.

6.1.3 Accuracy and Validity

The system will check role codes and if a director last reviewed a submission, the name of the analyst or business manager that last reviewed the submission will be displayed in the FASS-PH Analyst column.

6.1.4 Timing

FASS-PH must conform to the REAC standards of timing and timely operation. The following is a more detailed table of the timing information expected by the program within FASS-PH:

PERFORMANCE MEASURE	TESTING PROCEDURE
Timing	
FASS-PH will score submitted PHA submissions every evening.	After the programs have run in the REAC Nightly Batch in test environments, the database will be queried to confirm that the scoring procedures have executed properly throughout the testing phase.
FASS-PH will be available for PHA submission entry 24 hours per day, except for downtime during scheduled system maintenance and upgrades.	Multiple submissions will be made throughout the duration of the testing phase.
FASS-PH will provide capability to generate multiple reports 24 hours per day except for downtime during scheduled system maintenance and upgrades.	Multiple reports will be generated throughout the duration of the testing phase.
FASS-PH will provide capability to load every page in 8 seconds or less (except for waived pages).	Timing requirements cannot be fully tested. REAC does not have an automated testing tool capable of testing these requirements. However, the testing team will execute tests scripts with the debug application turned on in order to monitor load time in system test.
FASS-PH will provide capability to execute every stored procedure in 3 seconds or less (except for stored procedures on waived pages).	Timing requirements cannot be fully tested. REAC does not have an automated testing tool capable of testing these requirements. However, the testing team will execute tests scripts with the debug application turned on in order to monitor load time in system test.

6.1.5 Adaptability

Based on the business rule that a Director's name is never displayed in the FASS-PH analyst column, the Analyst's name and manager's name that last review's a submission will be displayed.

6.2 Environment

6.2.1 Support Software Environment

The support software environment is comprised of the following software packages:

Software	Description
Sybase	A widely used database management tool.
HTML	A widely used and accepted scripting language.
JavaScript	A widely used and accepted scripting language.
Cold Fusion Studio 5.0	A widely used application development tool.
ErWin	This tool allows the development team to develop the logical and physical models for the project.
PVCS Version Manager	This tool is used for configuration management.
PVCS Tracker	This tool is used for reporting and tracking system change requests.
SQL Advantage	This tool serves as an interface to the Sybase database.
SQL Programmer	This tool serves as an interface to the Sybase database.
Netscape 4.79, Internet Explorer 6.0 SP2	Browsers that serve as the default web browsers for the FASS-PH application.
Adobe Acrobat Reader Version 5.0 or higher	This tool is used to create the Data Collection Form Report.
XML Tools	These tools are used for developing and managing XML assets.
Dream Weaver	This tool is used for developing and managing web sites.

6.2.2 Interfaces

FASS-PH Inbox analyst column does not interface with other systems.

6.2.3 Storage

This capability does not require significant additional space. DCG will determine if additional space is necessary. For more information, please refer to Section 3.1.2 (Storage Medium) in the System/Subsystem Specifications document. Refer to HUD Handbook 2229.1 Records Disposition Scheduling for Automated System for further information on data storage.

6.2.3.1 *Internal Storage*

There are no new internal storage requirements to support this capability.

6.2.3.2 *Device Storage*

There are no new device storage requirements to support this capability.

6.2.3.3 *Offline Storage*

There are no new offline storage requirements to support this capability.

6.2.3.4 *Temporary and Permanent Storage*

There are no new temporary and permanent storage requirements to support this capability.

6.2.4 Security

The following table shows user access rights for reviewing prior years submission comments.

Role	Create	Read	Update	Delete	Detailed Description
PID		<input checked="" type="checkbox"/>			Users can only view the information.
FIA		<input checked="" type="checkbox"/>			Users can only view the information.
SMT		<input checked="" type="checkbox"/>			Users can only view the information.
CPV		<input checked="" type="checkbox"/>			Users can only view the information.
FID		<input checked="" type="checkbox"/>			Users can only view the information.
AM		<input checked="" type="checkbox"/>			Users can only view the information.
RFA		<input checked="" type="checkbox"/>			Users can only view the information.
GUS		<input checked="" type="checkbox"/>			Users can only view the information.
MRA		<input checked="" type="checkbox"/>			Users can only view the information.

6.2.5 Communications Environment

FASS-PH only requires that users access the system via the Internet or Intranet. All communications are done over this medium.

7.0 FDS REPORT PAGE PRINT FUNCTIONALITY

7.0 FDS REPORT PAGE PRINT FUNCTIONALITY

7.1 Program Description

The Financial Data Schedule (FDS) report page breaks wrong printing in Internet Explorer

This maintenance requirement will repair the printing functionality so that page breaks correctly when printing the FDS reports.

New or Modification: Modification

Screen Traceability: The following table traces the screen design to one or more business rules, process numbers, functional requirements, and issue tracking references (if applicable).

Business Rule #	Process #	Functional Requirement #	Source
6.1	4.1	499	RTM

7.1.1 Software Unit Description

This maintenance requirement will provide the functionality for the FDS report to break correctly when printed from Internet Explorer.

7.1.2 Software Unit

This modification applies to the internal and external systems. The FDS report page print function in Internet Explorer.

7.1.3 Accuracy and Validity

The FDS report page when printed in Internet Explorer will apply page breaks where appropriate.

7.1.4 Timing

FASS-PH must conform to the REAC standards of timing and timely operation. The following is a more detailed table of the timing information expected by the program within FASS-PH:

PERFORMANCE MEASURE	TESTING PROCEDURE
Timing	
FASS-PH will score submitted PHA submissions every evening.	After the programs have run in the REAC Nightly Batch in test environments, the database will be queried to confirm that the scoring procedures have executed properly throughout the testing phase.
FASS-PH will be available for PHA submission entry 24 hours per day, except for downtime during scheduled system maintenance and upgrades.	Multiple submissions will be made throughout the duration of the testing phase.
FASS-PH will provide capability to generate multiple reports 24 hours per day except for downtime during scheduled system maintenance and upgrades.	Multiple reports will be generated throughout the duration of the testing phase.
FASS-PH will provide capability to load every page in 8 seconds or less (except for waived pages).	Timing requirements cannot be fully tested. REAC does not have an automated testing tool capable of testing these requirements. However, the testing team will execute tests scripts with the debug application turned on in order to monitor load time in system test.
FASS-PH will provide capability to execute every stored procedure in 3 seconds or less (except for stored procedures on waived pages).	Timing requirements cannot be fully tested. REAC does not have an automated testing tool capable of testing these requirements. However, the testing team will execute tests scripts with the debug application turned on in order to monitor load time in system test.

7.1.5 Adaptability

Apply page break for FDS report page when printing in Internet Explorer.

7.2 Environment

7.2.1 Support Software Environment

The support software environment is comprised of the following software packages:

Software	Description
Sybase	A widely used database management tool.
HTML	A widely used and accepted scripting language.

Software	Description
JavaScript	A widely used and accepted scripting language.
Cold Fusion Studio 5.0	A widely used application development tool.
ErWin	This tool allows the development team to develop the logical and physical models for the project.
PVCS Version Manager	This tool is used for configuration management.
PVCS Tracker	This tool is used for reporting and tracking system change requests.
SQL Advantage	This tool serves as an interface to the Sybase database.
SQL Programmer	This tool serves as an interface to the Sybase database.
Netscape 4.79, Internet Explorer 6.0 SP2	Browsers that serve as the default web browsers for the FASS-PH application.
Adobe Acrobat Reader Version 5.0 or higher	This tool is used to create the Data Collection Form Report.
XML Tools	These tools are used for developing and managing XML assets.
Dream Weaver	This tool is used for developing and managing web sites.

7.2.2 Interfaces

The FDS report page print functionality does not interface with other systems.

7.2.3 Storage

This capability does not require significant additional space. DCG will determine if additional space is necessary. For more information, please refer to Section 3.1.2 (Storage Medium) in the System/Subsystem Specifications document. Refer to HUD Handbook 2229.1 Records Disposition Scheduling for Automated System for further information on data storage.

7.2.3.1 *Internal Storage*

There are no new internal storage requirements to support this capability.

7.2.3.2 *Device Storage*

There are no new device storage requirements to support this capability.

7.2.3.3 *Offline Storage*

There are no new offline storage requirements to support this capability.

7.2.3.4 *Temporary and Permanent Storage*

There are no new temporary and permanent storage requirements to support this capability.

7.2.4 Security

The following table shows user access rights for reviewing prior years submission comments.

Role	Create	Read	Update	Delete	Detailed Description
PID		<input checked="" type="checkbox"/>			Users can only view the information.
FIA		<input checked="" type="checkbox"/>			Users can only view the information.

```

8.0 FILE ATTACHMENTS STORAGE

8.0 FILE ATTACHMENTS STORAGE

8.1 Program Description

All file attachments in FASS-PH assessments must now be stored as Binary Large Objects (BLOBs) in the database as mandated by the Development Coordination Group (DCG).

This infrastructure requirement will replace the current method of storing file attachments in directories on the server. The new method will allow file attachments to be stored as BLOBs in the database.

New or Modification: New

Screen Traceability: The following table traces the screen design to one or more business rules, process numbers, functional requirements, and issue tracking references (if applicable).

Business Rule #	Process #	Functional Requirement #	Source
	1.2	501	RTM

8.1.1 Software Unit Description

This infrastructure requirement will provide the functionality of storing all file attachments submitted through the FASS-PH system as BLOBs in the REAC database. The current method of storing file attachments in directories on the server will no longer be available as of the 8.1.0.0 Release.

8.1.2 Software Unit

This infrastructure requirement applies to FASS-PH internal and external systems. Storage method for all file attachments accompanying a submission will be changed. File attachments will now have to be stored as BLOBs in the database. PDUMP and iplappsp1 file storage systems will be removed. A database table in the REAC database has been created for storing of the attachments. Cold Fusion pages will be created for uploading and downloading file attachments from the database.

8.1.3 Accuracy and Validity

This functionality is entirely on the backend and will not impact the interface or function of the system.

8.1.4 Timing

FASS-PH must conform to the REAC standards of timing and timely operation. The following is a more detailed table of the timing information expected by the program within FASS-PH:

PERFORMANCE MEASURE	TESTING PROCEDURE
Timing	
FASS-PH will score submitted PHA submissions every evening.	After the programs have run in the REAC Nightly Batch in test environments, the database will be queried to confirm that the scoring procedures have executed properly throughout the testing phase.
FASS-PH will be available for PHA submission entry 24 hours per day, except for downtime during scheduled system maintenance and upgrades.	Multiple submissions will be made throughout the duration of the testing phase.
FASS-PH will provide capability to generate multiple reports 24 hours per day except for downtime during scheduled system maintenance and upgrades.	Multiple reports will be generated throughout the duration of the testing phase.
FASS-PH will provide capability to load every page in 8 seconds or less (except for waived pages).	Timing requirements cannot be fully tested. REAC does not have an automated testing tool capable of testing these requirements. However, the testing team will execute tests scripts with the debug application turned on in order to monitor load time in system test.
FASS-PH will provide capability to execute every stored procedure in 3 seconds or less (except for stored procedures on waived pages).	Timing requirements cannot be fully tested. REAC does not have an automated testing tool capable of testing these requirements. However, the testing team will execute tests scripts with the debug application turned on in order to monitor load time in system test.

8.1.5 Adaptability

Apply page break for FDS report page when printing in Internet Explorer.

8.2 Environment

8.2.1 Support Software Environment

The support software environment is comprised of the following software packages:

Software	Description
Sybase	A widely used database management tool.
HTML	A widely used and accepted scripting language.
JavaScript	A widely used and accepted scripting language.
Cold Fusion Studio 5.0	A widely used application development tool.
ErWin	This tool allows the development team to develop the logical and physical models for the project.
PVCS Version Manager	This tool is used for configuration management.
PVCS Tracker	This tool is used for reporting and tracking system change requests.
SQL Advantage	This tool serves as an interface to the Sybase database.
SQL Programmer	This tool serves as an interface to the Sybase database.
Netscape 4.79, Internet Explorer 6.0 SP2	Browsers that serve as the default web browsers for the FASS-PH application.
Adobe Acrobat Reader Version 5.0 or higher	This tool is used to create the Data Collection Form Report.
XML Tools	These tools are used for developing and managing XML assets.
Dream Weaver	This tool is used for developing and managing web sites.

8.2.2 Interfaces

The FDS report page print functionality does not interface with other systems.

8.2.3 Storage

This capability does not require significant additional space. DCG will determine if additional space is necessary. For more information, please refer to Section 3.1.2 (Storage Medium) in the System/Subsystem Specifications document. Refer to HUD Handbook 2229.1 Records Disposition Scheduling for Automated System for further information on data storage.

8.2.3.1 *Internal Storage*

There are no new internal storage requirements to support this capability.

8.2.3.2 *Device Storage*

There are no new device storage requirements to support this capability.

8.2.3.3 *Offline Storage*

There are no new offline storage requirements to support this capability.

8.2.3.4 *Temporary and Permanent Storage*

New table was created in the REAC database for storage of file attachments.

8.2.4 Security

The following table shows user access rights.

Role	Create	Read	Update	Delete	Detailed Description
PID		<input checked="" type="checkbox"/>			Users can only view the information.
FIA		<input checked="" type="checkbox"/>			Users can only view the information.

5. faspha_app_upload_servlet:

9.0 RELATIVE SERVER NAME

9.0 REALTIVE SERVER NAME

9.1 Program Description

All hard coded port number will be removed from all Cold Fusion templates and replaced with the relative server name.

New or Modification: New

Screen Traceability: The following table traces the screen design to one or more business rules, process numbers, functional requirements, and issue tracking references (if applicable).

Business Rule #	Process #	Functional Requirement #	Source
	1	505	RTM

9.1.1 Software Unit Description

This infrastructure requirement will change the use of hard coded https port 801 number to relative server name on the production fix server.

9.1.2 Software Unit

Production fix server use of hard coded port number modified to use the relative server name.

9.1.3 Accuracy and Validity

This functionality is entirely on the backend and will not impact the interface or function of the system.

9.1.4 Timing

FASS-PH must conform to the REAC standards of timing and timely operation. The following is a more detailed table of the timing information expected by the program within FASS-PH:

PERFORMANCE MEASURE	TESTING PROCEDURE
Timing	
FASS-PH will score submitted PHA submissions every evening.	After the programs have run in the REAC Nightly Batch in test environments, the database will be queried to confirm that the scoring procedures have executed properly throughout the testing phase.
FASS-PH will be available for PHA submission entry 24 hours per day, except for downtime during scheduled system maintenance and upgrades.	Multiple submissions will be made throughout the duration of the testing phase.
FASS-PH will provide capability to generate multiple reports 24 hours per day except for downtime during scheduled system maintenance and upgrades.	Multiple reports will be generated throughout the duration of the testing phase.
FASS-PH will provide capability to load every page in 8 seconds or less (except for waived pages).	Timing requirements cannot be fully tested. REAC does not have an automated testing tool capable of testing these requirements. However, the testing team will execute tests scripts with the debug application turned on in order to monitor load time in system test.
FASS-PH will provide capability to execute every stored procedure in 3 seconds or less (except for stored procedures on waived pages).	Timing requirements cannot be fully tested. REAC does not have an automated testing tool capable of testing these requirements. However, the testing team will execute tests scripts with the debug application turned on in order to monitor load time in system test.

9.1.5 Adaptability

Change all hard coded port number to relative server name.

9.2 Environment

9.2.1 Support Software Environment

The support software environment is comprised of the following software packages:

Software	Description
Sybase	A widely used database management tool.
HTML	A widely used and accepted scripting language.
JavaScript	A widely used and accepted scripting language.
Cold Fusion Studio 5.0	A widely used application development tool.
ErWin	This tool allows the development team to develop the logical and physical models for the project.
PVCS Version Manager	This tool is used for configuration management.
PVCS Tracker	This tool is used for reporting and tracking system change requests.
SQL Advantage	This tool serves as an interface to the Sybase database.
SQL Programmer	This tool serves as an interface to the Sybase database.
Netscape 4.79, Internet Explorer 6.0 SP2	Browsers that serve as the default web browsers for the FASS-PH application.
Adobe Acrobat Reader Version 5.0 or higher	This tool is used to create the Data Collection Form Report.
XML Tools	These tools are used for developing and managing XML assets.
Dream Weaver	This tool is used for developing and managing web sites.

9.2.2 Interfaces

N/A.

9.2.3 Storage

This capability does not require significant additional space. DCG will determine if additional space is necessary. For more information, please refer to Section 3.1.2 (Storage Medium) in the System/Subsystem Specifications document. Refer to HUD Handbook 2229.1 Records Disposition Scheduling for Automated System for further information on data storage.

9.2.3.1 *Internal Storage*

There are no new internal storage requirements to support this capability.

9.2.3.2 *Device Storage*

There are no new device storage requirements to support this capability.

9.2.3.3 *Offline Storage*

There are no new offline storage requirements to support this capability.

9.2.3.4 *Temporary and Permanent Storage*

There are no temporary and permanent storage requirements to support this capability.

9.2.4 Security

The following table shows user access rights.

Role	Create	Read	Update	Delete	Detailed Description
PID		<input checked="" type="checkbox"/>			Users can only view the information.
FIA		<input checked="" type="checkbox"/>			Users can only view the information.
SMT		<input checked="" type="checkbox"/>			Users can only view the information.
CPV		<input checked="" type="checkbox"/>			Users can only view the information.
FID		<input checked="" type="checkbox"/>			Users can only view the information.
AM		<input checked="" type="checkbox"/>			Users can only view the information.
RFA		<input checked="" type="checkbox"/>			Users can only view the information.
GUS		<input checked="" type="checkbox"/>			Users can only view the information.
MRA		<input checked="" type="checkbox"/>			Users can only view the information.

9.2.5 Communications Environment

FASS-PH only requires that users access the system via the Internet or Intranet. All communications are done over this medium.

10.0 CHECK BOX FOR GUEST USERS

10.0 CHECK BOX FOR GUEST USERS

10.1 Program Description

This requirement calls for modification to how a guest user logs into FASS-PH. Currently a guest user manually checks the Guest User checkbox on the login interface. Web Access Subsystem (WASS) will remove the Guest user checkbox beginning with Release 8.1.0.0. The FASS-PH system will implement a new functionality on how a guest user is identified. The system will search to find if any Role ID's is associated with the User ID. If a Role ID's is associated with the User ID, the user will be redirected to the Main Internal page. If no Role ID is associated with the User ID, the user will be redirected to the Main Guest Page

New or Modification: Modification.

Screen Traceability: The following table traces the screen design to one or more business rules, process numbers, functional requirements, and issue tracking references (if applicable).

Business Rule #	Process #	Functional Requirement #	Source
1.1	1	497	RTM

10.1.1 Software Unit Description

The requirement to remove the Check Box for guest users will provide a modified process of logging guest users into the FASS PH. Currently a guest user manually checks the Guest User checkbox on the login interface. Web Access Security System (WASS) will remove the CHECK BOX from the logon screen. When a user logs on to WASS and select FASS-PH, WASS will send a guest role code for the user. FASS-PH will check its role table for that user; if the user has another role code then he will be assigned his FASS-PH role code. If the user does not have a FASS-PH role code, then his role code will default to GUEST.

10.1.2 Software Unit

This page is accessible to internal users only. The guest users check box, when checked, will direct the user to a guest page. The guest page does not contain links and other screens that are accessible to users with other roles. The new functionality will check for guest users and other role codes based on the user identification entered by the user.

10.1.3 Accuracy and Validity

All users that login to the FASS-PH internal system have a guest role. FASS-PH users have other roles besides that of a guest. Beginning with Release 8.1.0.0, when a user logs into the FASS-PH through the WASS interface, the system will check for role codes for that user, if the user has other role codes besides that of a guest, the user is directed to the main internal page, but if the user has only the role of a guest, the user is directed to the main guest page.

10.1.4 Timing

FASS-PH must conform to the REAC standards of timing and timely operation. The following is a more detailed table of the timing information expected by the program within FASS-PH:

PERFORMANCE MEASURE	TESTING PROCEDURE
Timing	
FASS-PH will score submitted PHA submissions every evening.	After the programs have run in the REAC Nightly Batch in test environments, the database will be queried to confirm that the scoring procedures have executed properly throughout the testing phase.
FASS-PH will be available for PHA submission entry 24 hours per day, except for downtime during scheduled system maintenance and upgrades.	Multiple submissions will be made throughout the duration of the testing phase.
FASS-PH will provide capability to generate multiple reports 24 hours per day except for downtime during scheduled system maintenance and upgrades.	Multiple reports will be generated throughout the duration of the testing phase.
FASS-PH will provide capability to load every page in 8 seconds or less (except for waived pages).	Timing requirements cannot be fully tested. REAC does not have an automated testing tool capable of testing these requirements. However, the testing team will execute tests scripts with the debug application turned on in order to monitor load time in system test.
FASS-PH will provide capability to execute every stored procedure in 3 seconds or less (except for stored procedures on waived pages).	Timing requirements cannot be fully tested. REAC does not have an automated testing tool capable of testing these requirements. However, the testing team will execute tests scripts with the debug application turned on in order to monitor load time in system test.

10.1.4.1 Adaptability

Removal of check box from WASS internal login interface is an infrastructure requirement that has to be adapted by FASS-PH. WASS controls access to the FASS-PH subsystem.

10.2 Environment

10.2.1 Support Software Environment

The support software environment is comprised of the following software packages:

Software	Description
Sybase	A widely used database management tool.
HTML	A widely used and accepted scripting language.
JavaScript	A widely used and accepted scripting language.
Cold Fusion Studio 5.0	A widely used application development tool.
ErWin	This tool allows the development team to develop the logical and physical models for the project.
PVCS Version Manager	This tool is used for configuration management.
PVCS Tracker	This tool is used for reporting and tracking system change requests.
SQL Advantage	This tool serves as an interface to the Sybase database.
SQL Programmer	This tool serves as an interface to the Sybase database.
Netscape 4.79, Internet Explorer 6.0 SP2	Browsers that serve as the default web browsers for the FASS-PH application.
Adobe Acrobat Reader Version 5.0 or higher	This tool is used to create the Data Collection Form Report.
XML Tools	These tools are used for developing and managing XML assets.
Dream Weaver	This tool is used for developing and managing web sites.

10.2.2 Interfaces

The FASS-PH internal system interfaces with WASS for this requirement.

10.2.3 Storage

This capability does not require significant additional space. DCG will determine if additional space is necessary. For more information, please refer to Section 3.1.2 (Storage Medium) in the System/Subsystem Specifications document. Refer to HUD Handbook 2229.1 Records Disposition Scheduling for Automated System for further information on data storage.

10.2.3.1 *Internal Storage*

There are no new internal storage requirements to support this capability.

10.2.3.2 *Device Storage*

There are no new device storage requirements to support this capability.

10.2.3.3 *Offline Storage*

There are no new offline storage requirements to support this capability.

10.2.3.4 *Temporary and Permanent Storage*

There are no temporary and permanent storage requirements to support this capability.

10.2.4 Security

The following table shows user access rights.

Role	Create	Read	Update	Delete	Detailed Description
PID		<input checked="" type="checkbox"/>			Users can only view the information.
FIA		<input checked="" type="checkbox"/>			Users can only view the information.
SMT		<input checked="" type="checkbox"/>			Users can only view the information.
CPV		<input checked="" type="checkbox"/>			Users can only view the information.
FID		<input checked="" type="checkbox"/>			Users can only view the information.

```

11.0 IDENTITY TYPE

11.0 IDENTITY TYPE

11.1 Program Description

The participant_assessment table contains a column named assessment_id, which has a column definition of IDENTITY. The column definition allows the assessment_id to automatically increment its value by 1 whenever a new row is added to the table. The removal of the IDENTITY column definition from the REAC database by the Development Coordination Group (DCG) calls for the FASS-PH system to be changed to get the MAX of the ASSESSMENT_ID column increment that value by 1 when adding a new row to the table.

New or Modification: Modification.

Screen Traceability: The following table traces the screen design to one or more business rules, process numbers, functional requirements, and issue tracking references (if applicable).

Business Rule #	Process #	Functional Requirement #	Source
	1.2	503	RTM

11.1.1 Software Unit Description

The participant_assessment table contains a column named assessment_id, which has a column definition of IDENTITY. The column definition allows the assessment_id to automatically increment its value by 1 whenever a new row is added to the table. The removal of the IDENTITY column definition from the REAC database by the Development Coordination Group (DCG) calls for the FASS-PH system to be changed to get the MAX of the ASSESSMENT_ID column increment that value by 1 when adding a new row to the table.

11.1.2 Software Unit

This requirement applies to the internal FASS-PH system users that need to create submissions. External users can create submission only if they have 'SMT' role code. Users will get to the PHA INFO Page by clicking on the "PHA INFO" tab.

11.1.3 Accuracy and Validity

Whenever a new row is added to the participant_assessment table, the assessment_id column will increment by the value of one.

11.1.4 Timing

FASS-PH must conform to the REAC standards of timing and timely operation. The following is a more detailed table of the timing information expected by the program within FASS-PH:

PERFORMANCE MEASURE	TESTING PROCEDURE
Timing	
FASS-PH will score submitted PHA submissions every evening.	After the programs have run in the REAC Nightly Batch in test environments, the database will be queried to confirm that the scoring procedures have executed properly throughout the testing phase.
FASS-PH will be available for PHA submission entry 24 hours per day, except for downtime during scheduled system maintenance and upgrades.	Multiple submissions will be made throughout the duration of the testing phase.
FASS-PH will provide capability to generate multiple reports 24 hours per day except for downtime during scheduled system maintenance and upgrades.	Multiple reports will be generated throughout the duration of the testing phase.
FASS-PH will provide capability to load every page in 8 seconds or less (except for waived pages).	Timing requirements cannot be fully tested. REAC does not have an automated testing tool capable of testing these requirements. However, the testing team will execute tests scripts with the debug application turned on in order to monitor load time in system test.
FASS-PH will provide capability to execute every stored procedure in 3 seconds or less (except for stored procedures on waived pages).	Timing requirements cannot be fully tested. REAC does not have an automated testing tool capable of testing these requirements. However, the testing team will execute tests scripts with the debug application turned on in order to monitor load time in system test.

11.1.5 Adaptability

DCG is removing the IDENTITY column definition from the participant_assessment table in the REAC database and this calls for FASS-PH to create a new functionality of incrementing new rows added to the participant_assessment table.

11.2 Environment

11.2.1 Support Software Environment

The support software environment is comprised of the following software packages:

Software	Description
Sybase	A widely used database management tool.
HTML	A widely used and accepted scripting language.
JavaScript	A widely used and accepted scripting language.
Cold Fusion Studio 5.0	A widely used application development tool.
ErWin	This tool allows the development team to develop the logical and physical models for the project.
PVCS Version Manager	This tool is used for configuration management.
PVCS Tracker	This tool is used for reporting and tracking system change requests.
SQL Advantage	This tool serves as an interface to the Sybase database.
SQL Programmer	This tool serves as an interface to the Sybase database.
Netscape 4.79, Internet Explorer 6.0 SP2	Browsers that serve as the default web browsers for the FASS-PH application.
Adobe Acrobat Reader Version 5.0 or higher	This tool is used to create the Data Collection Form Report.
XML Tools	These tools are used for developing and managing XML assets.
Dream Weaver	This tool is used for developing and managing web sites.

11.2.2 Interfaces

The participant_assessment table is in the REAC database. The REAC database is utilized by all the subsystems.

11.2.3 Storage

This capability does not require significant additional space. DCG will determine if additional space is necessary. For more information, please refer to Section 3.1.2 (Storage Medium) in the System/Subsystem Specifications document. Refer to HUD Handbook 2229.1 Records Disposition Scheduling for Automated System for further information on data storage.

11.2.3.1 *Internal Storage*

There are no new internal storage requirements to support this capability.

11.2.3.2 *Device Storage*

There are no new device storage requirements to support this capability.

11.2.3.3 *Offline Storage*

There are no new offline storage requirements to support this capability.

11.2.3.4 *Temporary and Permanent Storage*

There are no temporary and permanent storage requirements to support this capability.

11.2.4 Security

12.0 LOCCS/HUDCAPS INTERFACE CHANGE

12.0 LOCCS/UDCAPS INTERFACE CHANGE

12.1 Program Description

This is a DCG requirement eliminating the creation of permanent tables within any HUD related databases. A new procedure will be created to insert LOCCS/UDCAPS data into the REAC database. The sub-routine of creating temporary tables whether it is a database defined permanent or temp tables to house the data before inserting into the REAC database will be eliminated. The new procedure will insert data directly into the database.

New or Modification: Modification

Screen Traceability: The following table traces the screen design to one or more business rules, process numbers, functional requirements, and issue tracking references (if applicable).

Business Rule #	Process #	Functional Requirement #	Source
	5.4	502	RTM

12.1.1 Software Unit Description

The procedure of creating permanent tables within any HUD related databases would be eliminated. A new procedure will be created to insert LOCCS/UDCAPS data into the REAC database. The sub-routine of creating temporary tables whether it is a database defined permanent or temp tables to house the data before inserting into the REAC database will be eliminated. The new procedure will insert data directly into the database.

12.1.2 Software Unit

The LOCCS/UDCAPS interface for uploading data will be modified to allow insertion of data directly into actual tables from temp tables, then automatically deleting the temp tables once data has been loaded into the REAC database.

12.1.3 Accuracy and Validity

Uploaded data into temp tables through the LOCCS/UDCAPS interface will be loaded into actual tables in the database. Backend database or download of uploaded data will validate that data was inserted into the table.

12.1.4 Timing

FASS-PH must conform to the REAC standards of timing and timely operation. The following is a more detailed table of the timing information expected by the program within FASS-PH:

PERFORMANCE MEASURE	TESTING PROCEDURE
Timing	
FASS-PH will score submitted PHA submissions every evening.	After the programs have run in the REAC Nightly Batch in test environments, the database will be queried to confirm that the scoring procedures have executed properly throughout the testing phase.
FASS-PH will be available for PHA submission entry 24 hours per day, except for downtime during scheduled system maintenance and upgrades.	Multiple submissions will be made throughout the duration of the testing phase.
FASS-PH will provide capability to generate multiple reports 24 hours per day except for downtime during scheduled system maintenance and upgrades.	Multiple reports will be generated throughout the duration of the testing phase.
FASS-PH will provide capability to load every page in 8 seconds or less (except for waived pages).	Timing requirements cannot be fully tested. REAC does not have an automated testing tool capable of testing these requirements. However, the testing team will execute tests scripts with the debug application turned on in order to monitor load time in system test.
FASS-PH will provide capability to execute every stored procedure in 3 seconds or less (except for stored procedures on waived pages).	Timing requirements cannot be fully tested. REAC does not have an automated testing tool capable of testing these requirements. However, the testing team will execute tests scripts with the debug application turned on in order to monitor load time in system test.

12.1.5 Adaptability

When data is loaded into the REACs database, intermediate tables that were created are dropped. This process is inefficient and uses a lot of the database server resources. The new procedure will involve creation of temp tables to hold data coming from LOCCS/HUDCAPS. When the data is loaded into REAC database, the temp tables will be automatically deleted.

12.2 Environment

12.2.1 Support Software Environment

The support software environment is comprised of the following software packages:

Software	Description
Sybase	A widely used database management tool.
HTML	A widely used and accepted scripting language.
JavaScript	A widely used and accepted scripting language.
Cold Fusion Studio 5.0	A widely used application development tool.
ErWin	This tool allows the development team to develop the logical and physical models for the project.
PVCS Version Manager	This tool is used for configuration management.
PVCS Tracker	This tool is used for reporting and tracking system change requests.
SQL Advantage	This tool serves as an interface to the Sybase database.
SQL Programmer	This tool serves as an interface to the Sybase database.
Netscape 4.79, Internet Explorer 6.0 SP2	Browsers that serve as the default web browsers for the FASS-PH application.
Adobe Acrobat Reader Version 5.0 or higher	This tool is used to create the Data Collection Form Report.
XML Tools	These tools are used for developing and managing XML assets.
Dream Weaver	This tool is used for developing and managing web sites.

12.2.2 Interfaces

The system interfaces with the REAC database, which is used by all the subsystems.

12.2.3 Storage

This capability does not require significant additional space. DCG will determine if additional space is necessary. For more information, please refer to Section 3.1.2 (Storage Medium) in the System/Subsystem Specifications document. Refer to HUD Handbook 2229.1 Records Disposition Scheduling for Automated System for further information on data storage.

12.2.3.1 *Internal Storage*

There are no new internal storage requirements to support this capability.

12.2.3.2 *Device Storage*

There are no new device storage requirements to support this capability.

12.2.3.3 *Offline Storage*

There are no new offline storage requirements to support this capability.

12.2.3.4 *Temporary and Permanent Storage*

Temporary tables will be created to hold data until the data is loaded into REAC database tables.

12.2.4 Security

The following table shows user access rights.

Role	Create	Read	Update	Delete	Detailed Description
PID		<input checked="" type="checkbox"/>			Users can only view the information.
FIA		<input checked="" type="checkbox"/>			Users can only view the information.
SMT		<input checked="" type="checkbox"/>			Users can only view the information.
CPV		<input checked="" type="checkbox"/>			Users can only view the information.
FID		<input checked="" type="checkbox"/>			Users can only view the information.
AM		<input checked="" type="checkbox"/>			Users can only view the information.
RFA		<input checked="" type="checkbox"/>			Users can only view the information.
GUS		<input checked="" type="checkbox"/>			Users can only view the information.
MRA		<input checked="" type="checkbox"/>			Users can only view the information.

12.2.5 Communications Environment

FASS-PH only requires that users access the system via the Internet or Intranet. All communications are done over this medium.

12.3 Design Details

Screenshot of the LOCCS/UDCAPS interface.

The screenshot displays the 'Electronic Submission' page of the Financial Assessment system. At the top, a header box contains the title 'Electronic Submission' in large blue font, with 'Financial Assessment' above it and 'U.S. Department of Housing and Urban Development Real Estate Assessment Center (REAC)' below it. To the right of the text is a graphic of a stack of papers with an arrow pointing to it. Below the header, a navigation bar includes links for 'Inbox', 'Reports', and 'Maintenance'. A secondary bar contains buttons for 'PHA Risk Level', 'Help Maintenance', 'Auto Acceptance', and 'LOCCS / HUDCAPS Upload'. Below this is a 'Welcome Page Text' button. The main content area is titled 'Upload Instructions:' and provides a detailed guide on how to upload data files, including steps for selecting data type, browsing files, and verifying the upload. Below the instructions is a section for 'Upload Data Type:' with three radio button options: 'Upload LOCCS/UDCAPS Disbursement Data', 'Upload LOCCS/UDCAPS Program Reference Data', and 'Upload CFDA Program Data'. At the bottom, there is an 'Upload File:' section with a text input field and a 'Browse...' button. Finally, there are 'Upload' and 'Clear' buttons at the very bottom of the form.

PHA Risk Level Help Maintenance Auto Acceptance **LOCCS / HUDCAPS Upload**

Welcome Page Text

Upload Instructions:

This screen can be used to upload the LOCCS/UDCAPS data, LOCCS/UDCAPS Program Data, and CFDA Program Data. Please complete the following steps (in the order specified) to upload a specific data file:

- 1) Select the radio button for the type of data to upload.
- 2) Click on the Browse pushbutton and select the file that will be uploaded.
- 3) Click on the Upload pushbutton.
- 4) Verify that you receive a successful upload message.

Upload Data Type:

☐ Upload LOCCS/UDCAPS Disbursement Data
☐ Upload LOCCS/UDCAPS Program Reference Data
☐ Upload CFDA Program Data

Upload File:

13.0 Review Submission Page Text Change

13.0 REVIEW SUBMISSION PAGE TEXT CHANGE

13.1 Program Description

On the “Review Submission” page under the “Financial Statement” tab of the “Notes and Findings” page, modification will be made to the text on the description column. The text currently reads: “Government-Wide or General purpose Financial Statement”. The text will be changed to read: “Government-Wide and or Fund Financial Statement”.

New or Modification: Modification

Screen Traceability: The following table traces the screen design to one or more business rules, process numbers, functional requirements, and issue tracking references (if applicable).

Business Rule #	Process #	Functional Requirement #	Source
1.1-1, 2.1-1	2		RTM

13.1.1 Software Unit Description

On the “Review Submission” page under the “Financial Statement” tab of the “Notes and Findings” page, modification will be made to the text on the description column. The text currently reads: “Government-Wide or General purpose Financial Statement”. The text will be changed to read: “Government-Wide and or Fund Financial Statement”.

13.1.2 Software Unit

On the “Notes and Findings” page of the Financial Data Schedule section of the internal and external FASS-PH, “Financial Statement” tab line item G5150-010 description column text will be changed to read: “Government-Wide and or Fund Financial Statement”.

13.1.3 Accuracy and Validity

Text change for line item G5150-010 description column text will be displayed on the screen.

13.1.4 Timing

FASS-PH must conform to the REAC standards of timing and timely operation. The following is a more detailed table of the timing information expected by the program within FASS-PH:

PERFORMANCE MEASURE	TESTING PROCEDURE
Timing	
FASS-PH will score submitted PHA submissions every evening.	After the programs have run in the REAC Nightly Batch in test environments, the database will be queried to confirm that the scoring procedures have executed properly throughout the testing phase.
FASS-PH will be available for PHA submission entry 24 hours per day, except for downtime during scheduled system maintenance and upgrades.	Multiple submissions will be made throughout the duration of the testing phase.
FASS-PH will provide capability to generate multiple reports 24 hours per day except for downtime during scheduled system maintenance and upgrades.	Multiple reports will be generated throughout the duration of the testing phase.
FASS-PH will provide capability to load every page in 8 seconds or less (except for waived pages).	Timing requirements cannot be fully tested. REAC does not have an automated testing tool capable of testing these requirements. However, the testing team will execute tests scripts with the debug application turned on in order to monitor load time in system test.
FASS-PH will provide capability to execute every stored procedure in 3 seconds or less (except for stored procedures on waived pages).	Timing requirements cannot be fully tested. REAC does not have an automated testing tool capable of testing these requirements. However, the testing team will execute tests scripts with the debug application turned on in order to monitor load time in system test.

13.1.5 Adaptability

Flexibility of FASS-PH will be enhanced by this requirement and text changes are needed to adhere to accounting principles.

13.2 Environment

13.2.1 Support Software Environment

The support software environment is comprised of the following software packages:

Software	Description
Sybase	A widely used database management tool.
HTML	A widely used and accepted scripting language.
JavaScript	A widely used and accepted scripting language.
Cold Fusion Studio 5.0	A widely used application development tool.
ErWin	This tool allows the development team to develop the logical and physical models for the project.
PVCS Version Manager	This tool is used for configuration management.
PVCS Tracker	This tool is used for reporting and tracking system change requests.
SQL Advantage	This tool serves as an interface to the Sybase database.
SQL Programmer	This tool serves as an interface to the Sybase database.
Netscape 4.79, Internet Explorer 6.0 SP2	Browsers that serve as the default web browsers for the FASS-PH application.
Adobe Acrobat Reader Version 5.0 or higher	This tool is used to create the Data Collection Form Report.
XML Tools	These tools are used for developing and managing XML assets.
Dream Weaver	This tool is used for developing and managing web sites.

13.2.2 Interfaces

The Financial Statement section of the “Notes and Findings” page does not interface with other systems.

13.2.3 Storage

This capability does not require significant additional space. DCG will determine if additional space is necessary. For more information, please refer to Section 3.1.2 (Storage Medium) in the

System/Subsystem Specifications document. Refer to HUD Handbook 2229.1 Records Disposition Scheduling for Automated System for further information on data storage.

13.2.3.1 Internal Storage

There are no new internal storage requirements to support this capability.

13.2.3.2 Device Storage

There are no new device storage requirements to support this capability.

13.2.3.3 Offline Storage

There are no new offline storage requirements to support this capability.

13.2.3.4 Temporary and Permanent Storage

There are no new temporary and permanent storage requirements to support this capability.

13.2.4 Security

The following table shows user access rights for the DCF/Financial Statement reports.

Role	Create	Read	Update	Delete	Detailed Description
PID		<input checked="" type="checkbox"/>			Users can only view the information.
FIA		<input checked="" type="checkbox"/>			Users can only view the information.
SMT		<input checked="" type="checkbox"/>			Users can only view the information.
CPV		<input checked="" type="checkbox"/>			Users can only view the information.
FID		<input checked="" type="checkbox"/>			Users can only view the information.
AM		<input checked="" type="checkbox"/>			Users can only view the information.
RFA		<input checked="" type="checkbox"/>			Users can only view the information.
GUS		<input checked="" type="checkbox"/>			Users can only view the information.
MRA		<input checked="" type="checkbox"/>			Users can only view the information.

13.2.5 Communications Environment

FASS-PH only requires that users access the system via the Internet or Intranet. All communications are done over this medium.

13.4 Design Details

The following screenshot of the “Financial Statements” tab description column text.

Figure 13-1: NOTES AND FINDINGS /FINANCIAL STATEMENT PAGE

13.3.1 Input

No input records for this requirement

13.3.1.1 Input Records

The line items on the database are used as input to the process. There are no actual input records.

13.3.1.2 Input Data Elements

The line items on the database are used as input to the process.

13.3.2 Output

The text changes are shown on the screen.

13.3.2.1 Output Reports

The text changes are shown on the screen.

13.3.2.2 Output Data Element

13.3.3 Software Relationships

No changes for Release 8.1.0.0

13.3.4 Software Unit Logic

The following sections contain the detailed software unit logic.

Object Action Table

Field Name	Editable by REAC (Source System)	Datastore/ Reference Table	Data Element	Data Element Type/ Length	Values	Description/Comments
N/A	N/A	N/A	N/A	N/A	N/A	N/A

Software Unit Logic

On the “Notes and Findings” page of the Financial Data Schedule section of the internal and external FASS-PH, “Financial Statement” tab line item G5150-010 description column text will be changed to read: “Government-Wide and or Fund Financial Statement”.

Stored Procedures

N/A

APPENDIX A: BUSINESS RULES

Business Process	Req. #	Functional Requirement	Source	S	I	U	Mod/Dup	Release Identified
	1	Complete and Submit Financial Information						
	1.1	Access System						
	497	WASS will remove the guest checkbox on the Login interface. Have the system automatically recognize a guest user.	User Requirement					8.1.0.0
	505	Remove any instances of http port in ColdFusion templates and replace http port with the relative server.	User Requirement					8.1.0.0
	1.2	Download Submission Template						
	1.3	Download Draft Submission Data						
	1.4	Input Data						
	501	Change the storage of permanent file attachments from being part of the UNIX /Windows file system to being stored as Binary Large Objects (BLOBs) in the database. All file attachments need to be stored and retrieved on the REACS database.	User Requirement					8.1.0.0
	503	Remove identity attribute from the column definition in the assessment table and replace the attribute with a stored procedure to find the sequential primary key value.	User Requirement					8.1.0.0
	1.4.1	Input FDS						
	1.4.2	Input Data Collection Form						
	494	First, the DCF/Financial Statement/G3000-010 Type of Audit Report/G3000-060 & 070 will now reflect Fund Type and Opinion of the Fund rather than Program. Auditors should only be entering opinion for funds within the PHA.	User Requirement					8.1.0.0
	495	Modify Line Item 4200-050 to default to "N/A"; if and only if Line Item 4200-010 is selected "No" for Non-Major Programs audited A133, there will be no penalty when this opinion is selected.	User Requirement					8.1.0.0
	496	New logic will be in place, so that the external user will not be able to enter any amount on Line Item G1102. This new methodology should begin for all 9/30/2005 submissions.	User Requirement					8.1.0.0
	1.4.3	Input Notes and Findings						
	1.4.4	Input Material Difference Reason						
	1.5	Validate Data Format						
	1.6	Save Draft Financial Data						
	1.6.1	Transmission Error Handling (rollback)						
	1.6.2	Post Successful Submission Status						

Business Process	Req. #	Functional Requirement	Source	S	I	U	Mod/Dup	Release Identified
	1.7	Validate Data Against Business Rules						
	1.7.1	Generate Data Error Report						
	1.7.2	Correct Data Issues						
	1.8	Validate Data Against Edit Flags						
	1.8.1	Run External Program-Based Edit Flags						
	1.8.2	Run External Entity-Wide Edit Flags						
	1.9	Submit Final Submission Data						
	1.9.1	Submit for IPA Review						
	1.9.1.1	Perform IPA Review						
	1.9.1.2	Submit to PHA or Section 8 Entity for Corrections						
	1.9.2	Submit to REAC via Online System						
	1.9.2.1	Transmission Error Handling (rollback)						
	1.9.2.2	Post Successful Submission Status						
	1.9.3	Submit to REAC via XML Interface						
	1.9.3.1	Transmission Error Handling (rollback)						
	1.9.3.2	Post Successful Submission Status						
	2	Receive Financial Information						
	2.1	Post Financial Information						
	2.2	Display Financial Information for HUD User						
	504	Allow analysts to review prior year submission comments while still reviewing the current FYE submission. This will allow the analyst to review prior submission comments without navigating between multiple submissions.	User Requirement					8.1.0.0
